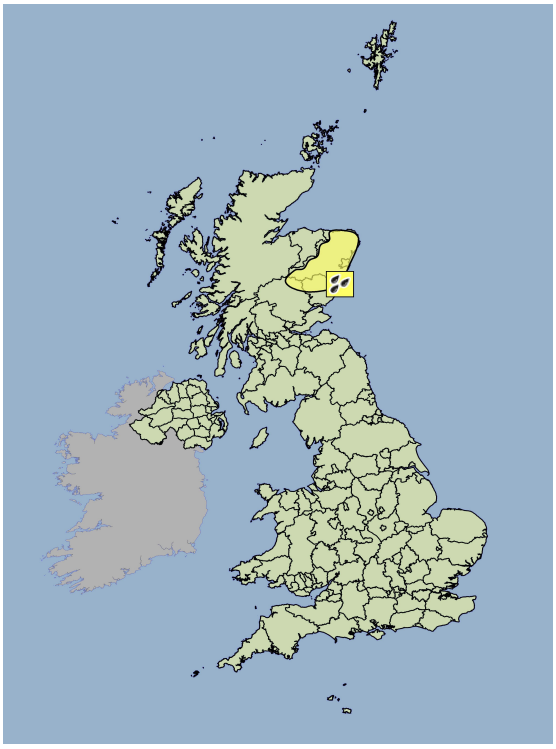
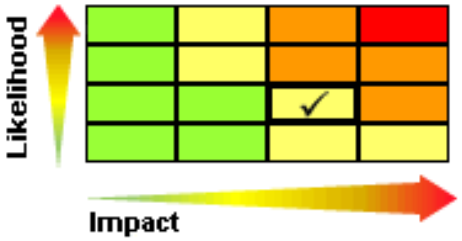
National Severe Weather Warning Service





Chief Forecasters Assessment
A low pressure system is expected to run into the UK from the southwest on Saturday, becoming slow-moving over the north of the UK on Sunday. This will push further areas of rain and some hill snow northwards across Scotland on Saturday evening and through Sunday.

Some uncertainties do remain in the genesis and behaviour of this system and so this alert is likely to be updated in the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **18:00 on Sat, 09th Jan 2016** until **06:00 on Sun, 10th Jan 2016**

An area of rain is expected to move northwards across Scotland on Saturday evening before becoming slow moving over the far north of mainland Scotland during Sunday. This will bring further accumulations of 10-20 mm over eastern Scotland with 30 mm over the higher ground.

Please be aware that with saturated ground this has the potential to prolong ongoing flooding impacts in eastern Scotland but is currently not expected to lead to renewed flooding issues.
